

The COMBACK ARION is a scalable rackmounted tape library. When fully configured, the ARION has 640 tape slots with 16 LTO-FH drives. It is fully scalable. Starting with 40 tape slots and one LTO-FH drive, it can be scaled in increments of 40. It is ideally suited for long-term storage, archiving, and backup of large amounts of data. The library supports both full-height and half-height LTO drives.

Scalable

Thanks to its modular design, the ARION is easily scalable. Due to this structure, it can be flexibly configured for every application.

In conjunction with the S3 appliance, several ARION systems can be operating as one large system. In this way, several thousand tape slots are available.

Reliable

The ARION is one of the most reliable tape libraries on the market. Permanent and ongoing endurance tests ensure one of the highest quality standards for tape libraries. If parts do need to be replaced, this can be done in just a few minutes. A Philips screwdriver size 2 is sufficient. All parts of the Arion can be replaced extremely quickly.

Form factor:	19" rackmount
Base Modul:	3U/40 Tape Slots
Min. amount of Tapeslots:	40
Max. amount of Tapeslots:	640
Max. amount of Drives:	48 HH or 16 FH
Connection options:	SAS or FC
Supported Drive technologies:	LTO3 - LTO9 ff.
Scalable:	Yes
